## About the Faculty Development Program

Although "regular" intelligence is important to success in life, emotional intelligence is key to relating well to others and achieving your goals. Many people believe that it is at least as important as regular intelligence, and many companies now use emotional intelligence testing to hire new staff. Emotional intelligence is an awareness of your actions and feelings – and how they affect those around you. It also means that you value others, listen to their wants and needs, and are able to empathize or identify with them on many different levels.

In the world of global competition and relationship fallacy, the word 'emotional intelligence' played a pivotal role in maintaining social rapport and professional efficiency.
